DETAILED ACTION

Response to Amendment

1. The allowable for claims 1, 2 and 10 is withdrawn.

Claim Objections

2. Claims 13, 14, 16 and 17-20 are objected to because of the following informalities:
 - (1) In claim 13, line 2, "the channels" should be - - -channels- -;
 - (2) In claim 14, line 1, it seems that claims 14 should depend on claim 4 instead claim 1 because "the good channels" and "the band channels" are not recited in claim 1;
 - (3) In claim 16, line 1, delete "using uses" and change "the channels" to - - channels- -;
 - (4) In claim 17, line 15, "an original" should be - -the original- -; and
 - (5) In claim 20, line 15, it is unclear what "using a frequency" is for.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 2 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Cooklev et al. (US 2003/0081654).

As disclosed in paragraph 0025 and claim 1, Cooklev et al. discloses a method of intelligent frequency hopping, comprising:

(1) regarding claim 1:

generating a bad window (the selected channel deteriorate) and a good window (set of good channel);
determining a desired frequency type based on a frequency sequence (0025);
using an original hopping sequence to sample an original frequency in the frequency band (see claim 1); and

selecting the original frequency as an operating frequency when the original frequency is the desired frequency type (claim 1).

(2) regarding claim 2:

using a frequency from the good window when the original frequency is not the desired frequency type, and the desired frequency type is a good frequency (see 0025).

(3) regarding claim 10:

wherein sampling the plurality of channels samples all channels available to a network (Bluetooth system, see 0019-0023).

Allowable Subject Matter

5. Claims 3-9 and 11-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. Claims 17-20 would be allowable if rewritten to overcome the objections, set forth in this Office action.
7. The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to teach the method comprising using a frequency from the band window as recited in claim 3, and defined a ration as recited in claims 4-6 and 17-20.
